Secure Network Edge

Network security, reliability, and visibility for standalone locations
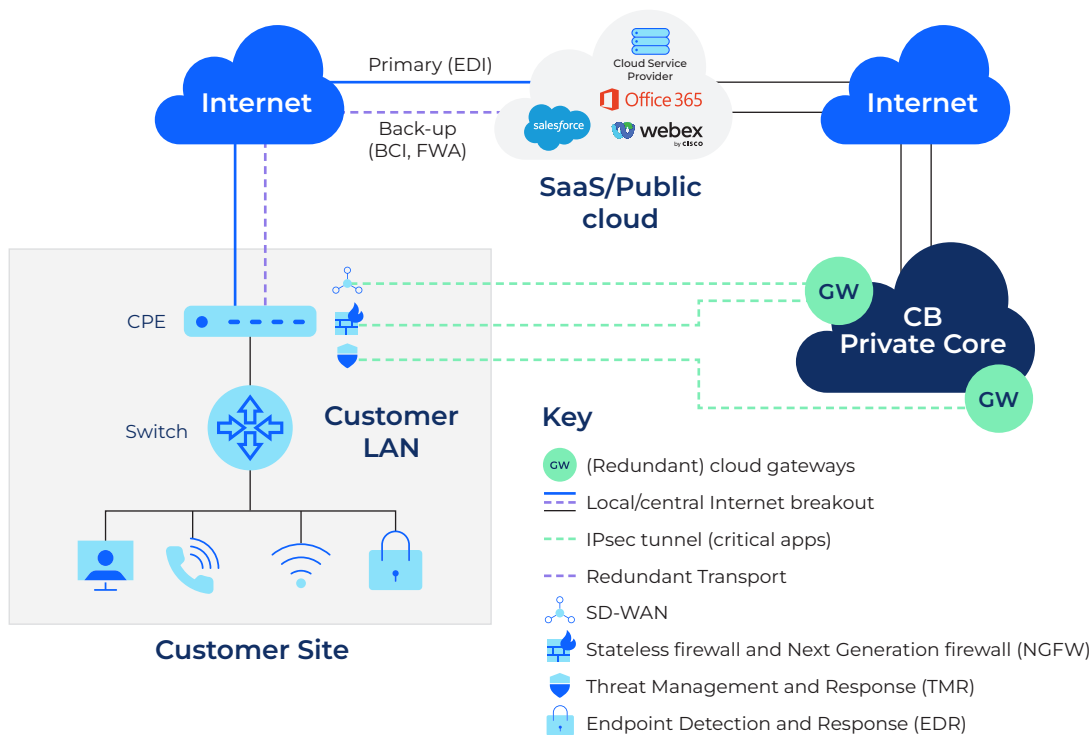

Product Sheet: Managed SD-WAN

COMCAST BUSINESS

MASERGY

Today's digital economy requires businesses to be resilient, secure, and reliable, regardless of size, location, or budget. Secure Network Edge is a premium single-site secure network solution with built-in security features designed specifically for small businesses relying on cloud resources. Featuring reliable connectivity and application aware bandwidth optimization, Secure Network Edge helps applications run more smoothly for businesses with a single location or multiple standalone locations. All with the ease and speed of zero-touch provisioning to help minimize business disruptions.

Help keep mission-critical functions running

Companies of all sizes can get Masergy's managed global networking services and firewall policy configuration with Secure Network Edge. An agile solution for SMB and Mid-Market customers, Secure Network Edge delivers turnkey SD-WAN for standalone locations relying on cost-effective public Internet services to connect to cloud resources.

With Secure Network Edge, you can connect with cloud gateways that enhance real-time application control, visibility, and performance, plus reliable static IP for inbound fail-over.

Customer Site

Key

- GW (Redundant) cloud gateways
- Local/central Internet breakout
- IPsec tunnel (critical apps)
- Redundant Transport
- SD-WAN
- Stateless firewall and Next Generation firewall (NGFW)
- Threat Management and Response (TMR)
- Endpoint Detection and Response (EDR)

Features

- High performing and reliable carrier-grade Internet with redundant connectivity services
- Fortinet® powered security with next-gen firewalls for perimeter security and 24/7 SOC services for threat management & response (TMR)
- Intelligent application aware traffic management with direct connections to cloud services

Benefits

- Enterprise-grade services at a low cost for single location businesses or businesses that need to manage connectivity to the cloud
- Peace of mind with built-in security features to help protect users and applications from cyberthreats when using broadband connectivity
- Easy, streamlined installation* with zero-touch provisioning, making it fast and easy to optimize business continuity

*Professional installation available upon request.

Advanced secure networking

Secure Network Edge provides standalone locations the built-in security that enterprises count on. In addition to stateful firewall, web filtering, app control, next-gen firewall, anti-virus, IDS, and IPS, Secure Network Edge offers 24x7 SOC-based Threat Management and Response (TMR) and optional Endpoint Detection and Response (EDR) that alleviate your team of monitoring and threat response. Plus, you can see how your network, application performance, and security are impacted by different events using our AI virtual assistant, AIOps, that includes real-time analytics and security alerts for your site and users.
